

TECHNICAL SKILL BUILDING IOD

00:00 START

Interviewee #1

The agenda is wide, diverse. It hosts many, many tracts and as such there is something here for just about everybody.

Interviewee #2

I am able to get knowledge about the DBII product as well as I am able to talk to many people around here.

Interviewee #3

The range of technical expertise here is just outstanding.

Interviewee #4

We have been able to get in on some good sessions today, looking at some SAP accelerators. Some great products, we are definitely going to take back a lot of good knowledge to our organization.

Interviewee #5

Here at IOD certification testing is free to all conference attendees. Tests normally cost up to \$200. It is a great benefit. If they do pass their exams they can come to the Certification Lounge and rest, relax and have great food.

Interviewee #6

The attendees from the Hands-On lab will come away with an in-depth view of various hot topics with the information management products. Coming from the Hands-On Labs they will get a view of how to work with a product, be able to work with specific experts in that area and then be able to implement those in their systems.

Interviewee #7

My primary goal here is to get some knowledge about DBII. I was just in on a lab session that was very useful for my job.

Interviewee #8

The Meet The Experts program has really grown over the years. Last year we had eight rooms and this year we have twenty rooms. This year we also have more than 100 experts from all different segments.

Interviewee #9

In addition to customers getting 700 courses they can choose from here at the expo, they can also connect here with us at the Skills Hub. They can expect to walk away with conversations that they have had, in-depth conversations with training and services experts to give them more in-depth information for what they need.

Interviewee #10

One of the offerings in the Technical Skills program is the Usability Sandbox. A sandbox is a fun place. Sandbox here means a place to come and try out new technologies, look at future designs. We do this in small group sessions with trained usability professionals.

Interviewee #11

This is the Developer Den. It is the hang out for developers at IOD. Essentially we want to give them this place to really hang out and collaborate with each other, brainstorm, share ideas and really interact with the product teams that build the products they use.

Interviewee #12

I think IOD has the most to offer me.

Interviewee #13

A lot of information that I am going to put to work. That is what the whole conference is about.

Interviewee #14

Customers can ask us specific questions on the issues, go home apply the solution and get the value immediately.

Interviewee #15

This is on a par with all of the premier technical conferences that I have been to.

Interviewee #16

Our clients are making software investments all the time. There is obviously a professional services component which is what we do. The education that our people will get by coming to the conference, the knowledge that we will be able to pass on to some of our customers who may not be able to be here is certainly a big value.
