

IBM Certified Database Administrator DB2 9 for z/OS

Database Administrator at a Glance

Certification Requirements:

- To attain the IBM Certified Database Administrator - DB2 9 for z/OS certification, candidates must pass two exams (730 and 732) or be certified as an IBM Certified Associate - DB2 Universal Database V8.1 for Family Fundamentals and pass exam 732.

Recommended Prerequisite:

- At least two years experience as a database administrator on DB2 9 for z/OS
- Experience in both DBA application and system programming areas
- Knowledge of major programming languages (such as COBOL, Java, and C++)

The IBM Certified Database Administrator is the lead database administrator (DBA) for the DB2 9 product on the z/OS operating system. This individual has significant experience as a DBA and extensive knowledge of the DB2 9, specifically the new features and functionality related to Version 9. They are capable of performing the intermediate to advanced tasks related to database design and implementation, operation and recovery, security and auditing, performance, and installation and migration/upgrades specific to the z/OS operating system.
