

Changing the Color Scheme of a Lotus Quickr Theme

It is recommended you have knowledge of CSS (Cascading Style Sheets) HTML and image creation/editing techniques before editing or creating a style sheet.

The default (blue) theme is controlled by the css file "defaultTheme.css" located here: `/qphtml/skins/common/themes/nls/lang/defaultTheme.css`

and by the Quickr 8.1 standard theme's css file "Quickr81.css" located here: `/qphtml/skins/quickr81/nls/lang/defaultTheme.css`

Note: replace *lang* with the appropriate language code, e.g., "en".

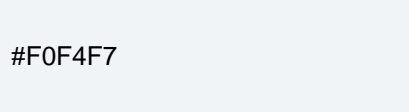

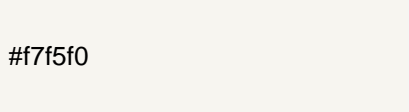

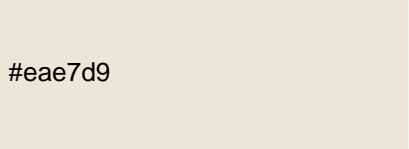

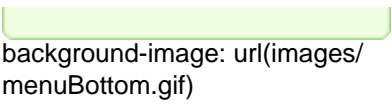

IMPORTANT: Please make a **backup copy** of the original "Quickr81.css" before making any changes to it on the server. Editing "defaultTheme.css" is **not** recommended.

The following table lists the common "lotus" classes and shows their default colors and images, and the colors and images used in the sample "Red" theme included with the article "Customizing themes in IBM Lotus Quickr services for IBM Lotus Domino V8.1".

NOTE: Not all the classes shown below are currently used by Lotus Quickr.
